Current Concerns About SARS (Severe Acute Respiratory Syndrome)
humankind. Let us pray that we do not allow SARS to have such an effect.

History makes it clear that the spread of disease can delay or even prevent the progress of countries. For example, a study of the 1918 influenza pandemic shows that it delayed the progress of the war in Europe. It is therefore important to learn from the lessons we have learned in dealing with SARS and to prevent such outbreaks from happening again. We need to be more prepared and to have better systems in place.

Today, modern transportation systems allow us to go anywhere in the world in just a few days. But also the population at large is now more exposed to medical procedures and if SARS could spread, it could be devastating. Therefore, it is important to improve the understanding of not only people working in medical facilities but also the general public. Research is being conducted to develop a vaccine to prevent its spread. Finally, if SARS were to spread, there would be an outbreak in other countries. This is why it is important to be prepared.

In areas where there are many cases of SARS, prompt isolation and management of the infected people are necessary to prevent the spread of the disease. From China to Vietnam, the government has taken steps to control the spread of the disease. Isolation and quarantine measures have been put in place to prevent the spread of the disease. The government has also increased the number of medical facilities and personnel to handle the situation.

In summary, the lessons we have learned in dealing with SARS can be applied to other diseases as well. It is important to be prepared and to have better systems in place to prevent the spread of disease.
